

USER INTERFACE AND USER EXPERIENCE DESIGN LAB EXPERIMENT 1

NAME: M GAGANTEJSAI
REG NO: 23MIS0661

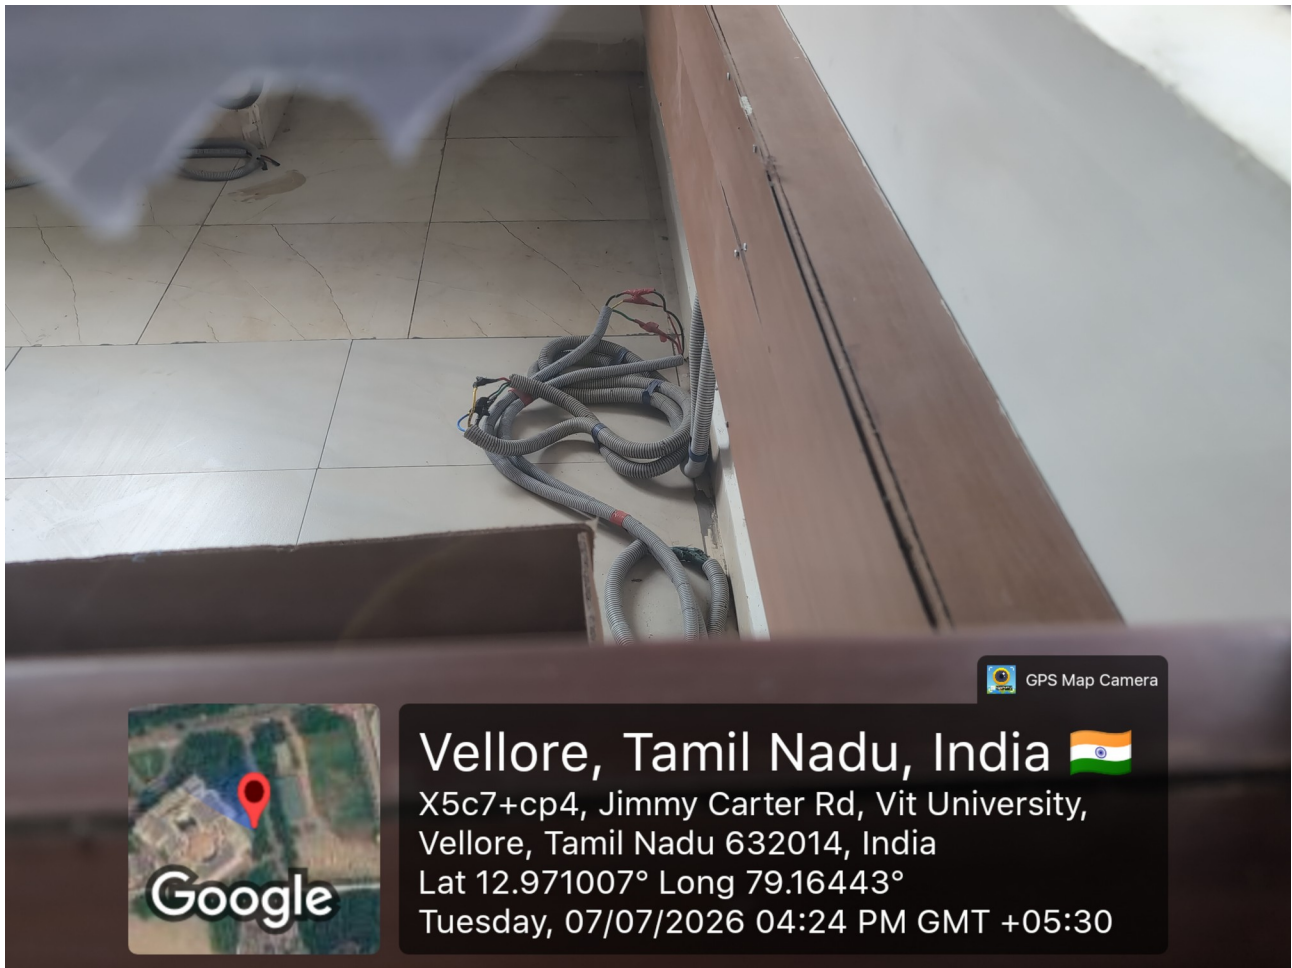

Bad Design 1: **Loose Electrical Conduits on Floor**

Description:

Electrical conduits are left loose on the classroom floor instead of being properly enclosed.

Source of Photograph: Captured by me (GPS Enabled)

Place: SJT LAB PREMISES, VIT University, Vellore

Reasons why the design is bad:

Creates a tripping hazard. May damage electrical cables. Difficult to clean around. Unsafe during emergencies.

Suggested Improvement: Route cables through wall conduits. Install cable trays. Cover exposed wiring. Place warning signs until repaired.

Bad Design 2: Staircase Safety Net

Description : A large safety net covers a staircase and partially blocks visibility and movement.

Source: Captured by me (GPS Enabled) Place SJT, VIT University, Vellore

Reasons: Reduces visibility. Can confuse users during evacuation. Makes the staircase feel obstructed. Difficult for maintenance.

Suggested Improvement: Install properly tensioned side safety mesh. Keep the walking path completely clear. Ensure emergency exits remain unobstructed.

Bad Design 3 : Electrical Distribution Board with Socket Below

Description : An electrical socket is installed directly beneath the electrical distribution board.

Source: Captured by me (GPS Enabled) Place Sjt, VIT University, Vellore

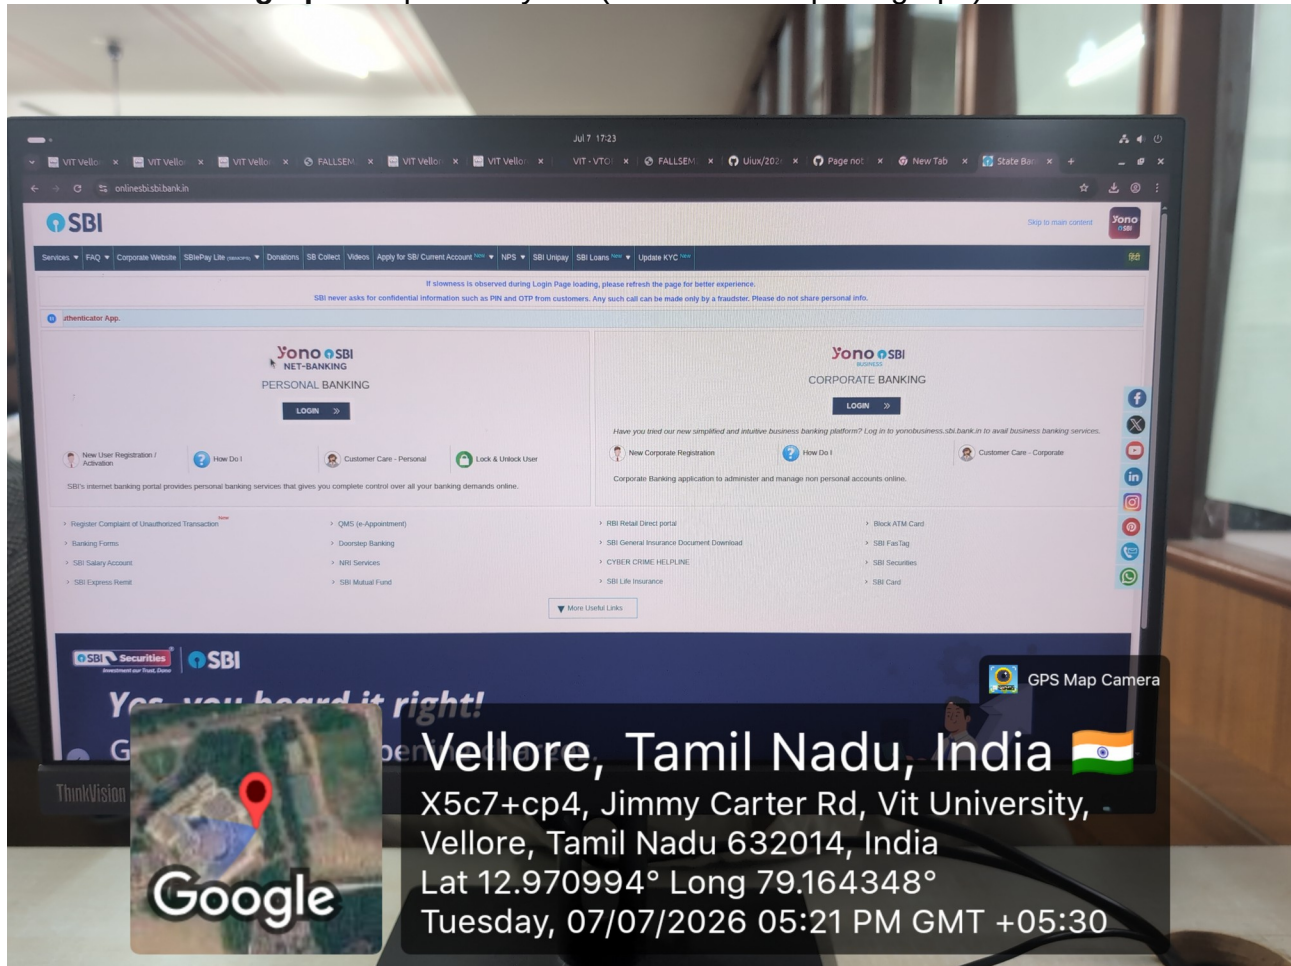

Reasons: Difficult to access safely. Plug cable hangs awkwardly. Risk while operating the panel. Poor ergonomic placement.

Suggested Improvement: Relocate socket away from the panel. Provide dedicated maintenance outlets. Label electrical equipment clearly.

Bad Design 4: Cluttered Online Banking Homepage (SBI Net Banking)

Description: The SBI Net Banking homepage contains too many menus, links, announcements, login options, and icons on a single page. The interface appears crowded, making it difficult for users to quickly find the required service.

Source of Photograph: Captured by me (GPS-enabled photograph)

Place: SJT Computer Lab, VIT University, Vellore

Reasons why the design is bad: Too much information displayed on one screen, causing cognitive overload. Personal Banking and Corporate Banking sections compete equally for attention. Small font size reduces readability. Multiple navigation menus and links make the interface confusing for first-time users. Important actions (such as Login) do not stand out sufficiently. Excessive use of banners and links distracts users from completing their primary task.

Suggested Improvement: Simplify the homepage by reducing unnecessary information. Increase font size and improve spacing between sections. Highlight the main Login button with better visual hierarchy. Group related services into expandable categories. Reduce visual clutter and improve the overall layout for easier navigation.
